Electron temperature · mean · start 535 → frame 543
Lead 8 of 16 · +25.06 µs

Autoregressive rollout

4 observed volumes initially.
Predictions feed back thereafter.

One diffusion sample per model.
No future truth supplied.

instantaneous toroidal mean (n = 0)
Fixed color scales across models and all 16 leads; native R–Z mesh connectivity; 256-color display export.
